

SARASOTA COUNTY ARES STATION LOCATION ZONE MAP

www.srqares.org

In an effort to better locate SRQ ARES members and other stations during emergency activation, practice drills, or events, the county has been divided into zones. This will allow a resource net control operator as well as other stations to quickly determine your general location in the event of a real emergency. Breaking the county up into zones rather than zip codes will be more efficient and easier to manage during an emergency, drill, or event.

Most of the zones cover an area of approximately 5 miles or less. The county map has been broken into 3 sections in order to legibly fit in this document. Please save and/or print out so it is readily available to reference. The very last page has the zone description outlining the major roads bordering each zone. Find the zone that your station falls within the borders of. During a simulated event or emergency activation, a net resource operator may ask you to identify your zone.

Sarasota and Manatee County stations often times participate together during practice drills and events. Manatee County has also implemented a similar county zone system for identifying station locations. When Sarasota County stations participate or check-in to a Manatee County drill or event, your zone number should be preceded by the letter **S** to indicate you are in a Sarasota zone. (i.e. – S5 or S12). Similarly, Manatee County station zones will be preceded with the letter **M** to indicate they are in a Manatee County zone. (i.e. – M2 or M20)

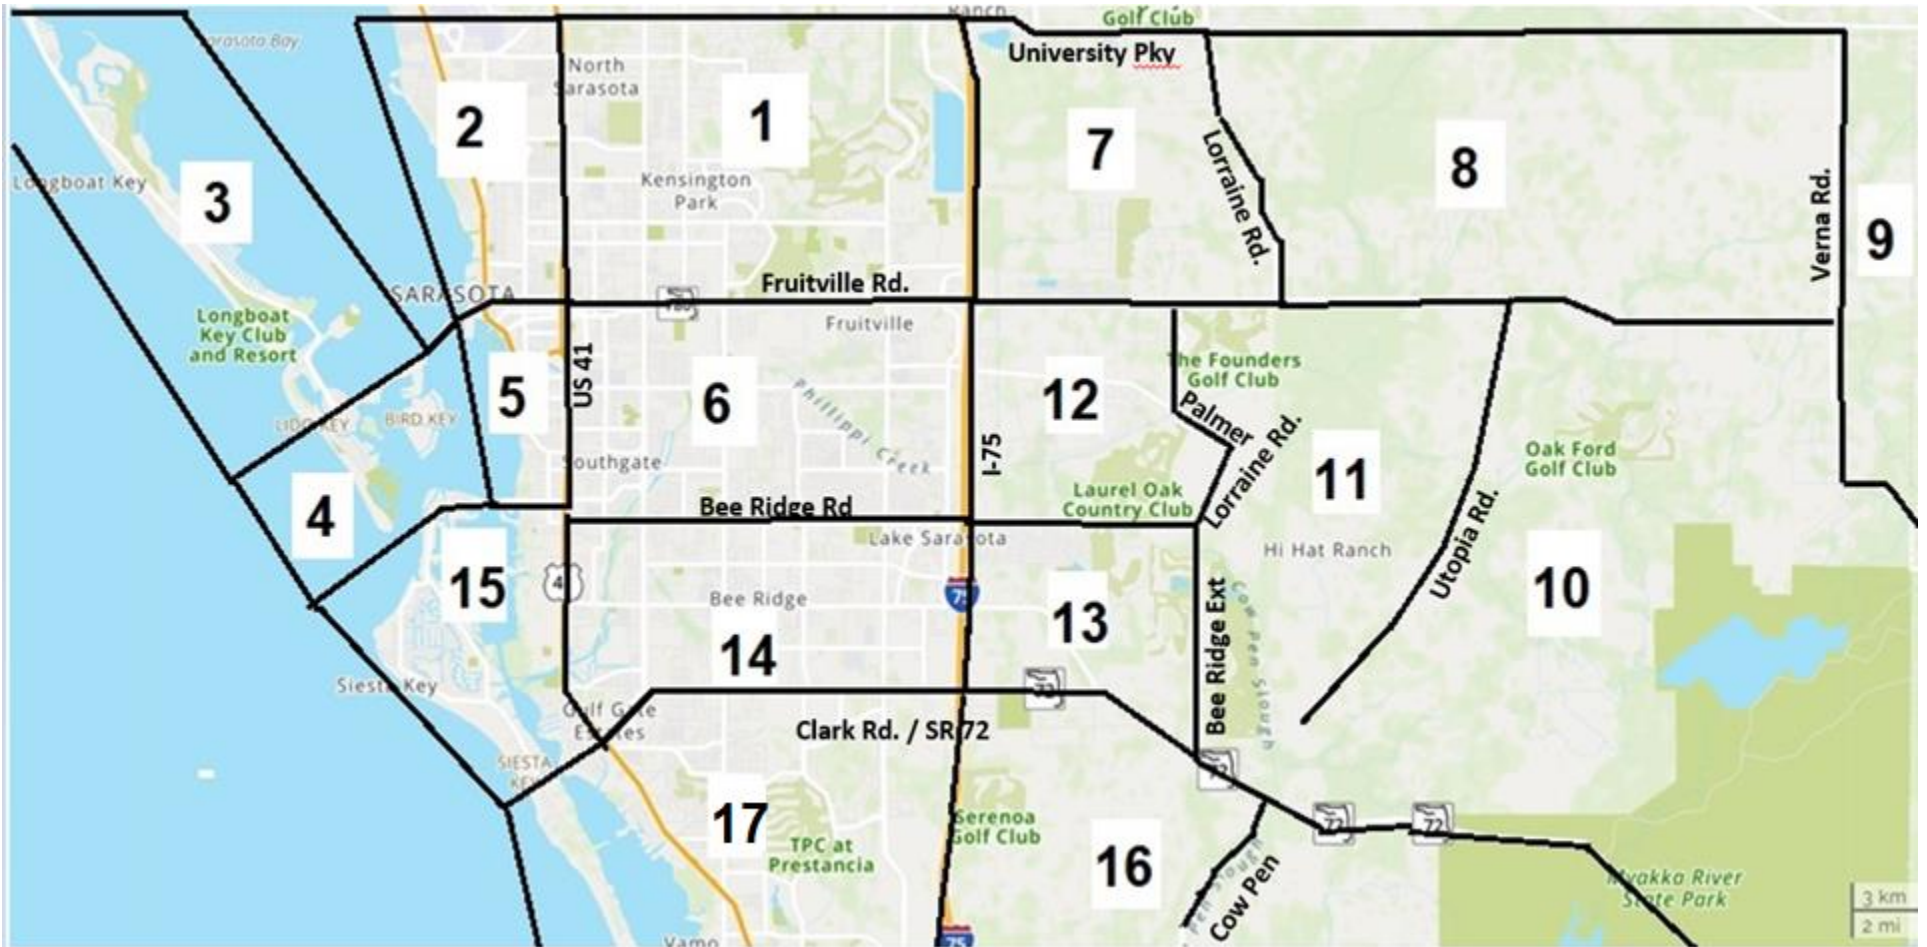

During a real emergency activation, communications and location identification are very critical. Using these zones, you should be able to identify stations in zones adjacent to yours that you should be able to reach over simplex radio. In the event that repeater access is unavailable, you may need to call on other nearby stations for support and/or relay critical information.

In a real emergency, your communication skills and abilities could be what makes the difference between life or death. Thank you for being an Amateur Radio Emergency Service Volunteer!
